

# WindShot

## IOT Wind LiDARs

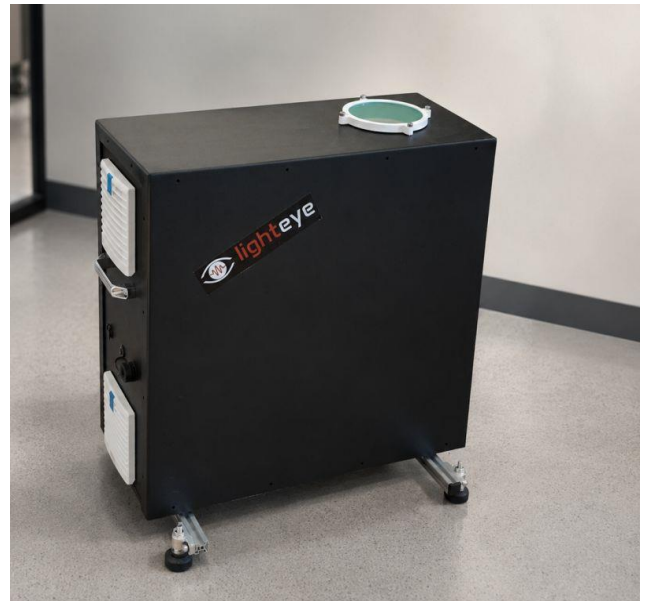

~~"LiDARs: costly and limited."~~

Not anymore.

We are bringing LiDARs to IOT -  
and density to high-res forecasts

## Features

- Boundary Layer Wind Data
- Worlds Cheapest High-res Vector Field
- Wind gusts, shear and turbulence

Most of meteorology happens in the boundary layer.  
We are bringing high-res BL data to IOT.

***Towards a LiDAR network to  
conquer the wind.***

## TECHNICAL DETAILS

| LiDAR                   |                              |
|-------------------------|------------------------------|
| SPECS                   | VALUE                        |
| Laser                   | 1550 nm, Class 1M (eye-safe) |
| Max. Altitude           | 2.5km (800m@1s, 2.5km@10m)   |
| Height Resolution       | 20 - 50 m (selectable)       |
| Scan speed              | 2 Rev/Min                    |
| Max. wind speed         | 60 m/s                       |
| Wind speed accuracy     | 0.2 m/s                      |
| Wind direction accuracy | 3°                           |
| Temperature             | -10 - 40 °C                  |
| Power consumption       | 40 W (24 V power supply)     |
| Weight                  | 20 kg                        |
| Size                    | 50 x 50 x 25 cm³             |
